SNP CrystalBridge®

The platform to drive data excellence

System Transformation: "On the Road to S/4HANA"

New
S/4HANA

**Selective
Transfer**

1:1
Migration

Depending on the transformation scenario, different data management strategies are relevant.

Retaining Legacy Data and Documents

**„Keep Your
DATA, Not
the Cost“**

- System migration - such as S/4HANA
- Carve-out scenarios, mergers & acquisitions
- System consolidation

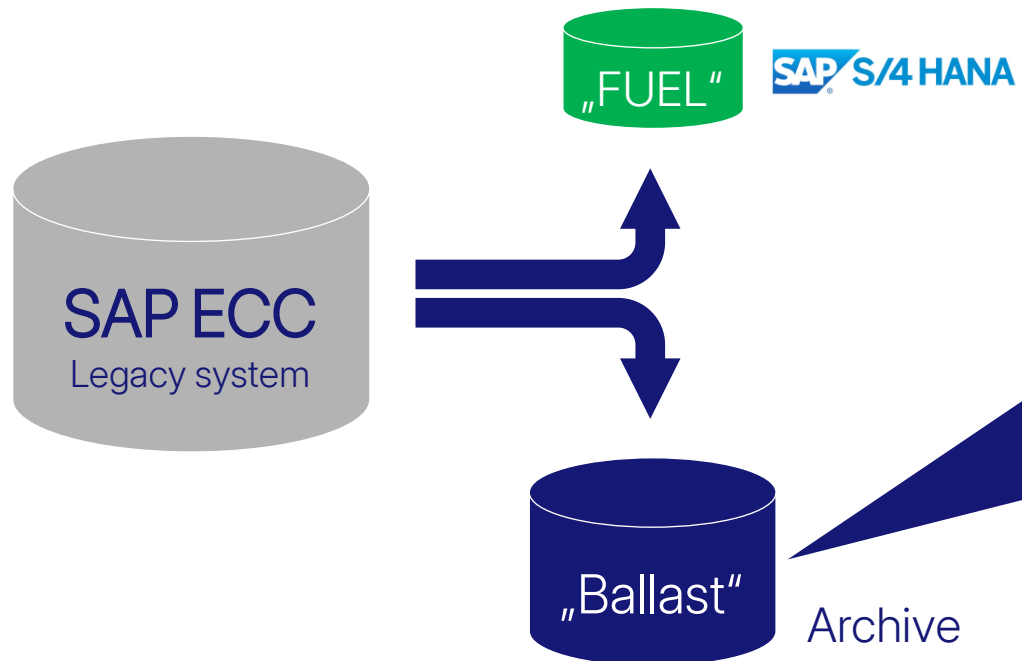

Objective

- Consistently retain data & documents
- Simplify retention compliance
- Enable flexible, transparent data access

Selective Transformation – Classify Your Data!

Separate data in scope of migration from the ones you have to retain

- Data that you have to retain for audit requirements and internal analysis/service needs
- Transparent retrieval options
- Retention management
- Compliant storage

Requirements for Retaining Data and Related Documents

Data retention in selective transformation scenarios is relevant for data...

- ... that is not in scope of the transformation target.
- ... that is required for dedicated service, reporting or analytic purposes.
- ... covering legal and auditing purposes.

Data must be retained for many years...

- ... but hosting and administration costs (TCO) must be low.
- ... but technology must be flexible and future-proof.

Data must be easily accessible...

- ... for business users.
- ... for internal/external auditors.

Data must be deleted consistently...

- ... once its retention period expires.
- ... but not when under legal hold.

Legacy System: Keep - or Retire?

Keep the existing ECC as a read-only system for occasional access?

Retire the legacy ECC system (decommissioning)

- ✓ Extract data/documents and retain these compliantly
- ✓ Ensure transparent access, e.g. from new S/4HANA

Agenda

- SAP System Decommissioning
- Datafridge Concept & Features
- Project Approach & Support
- Summary, Q & A

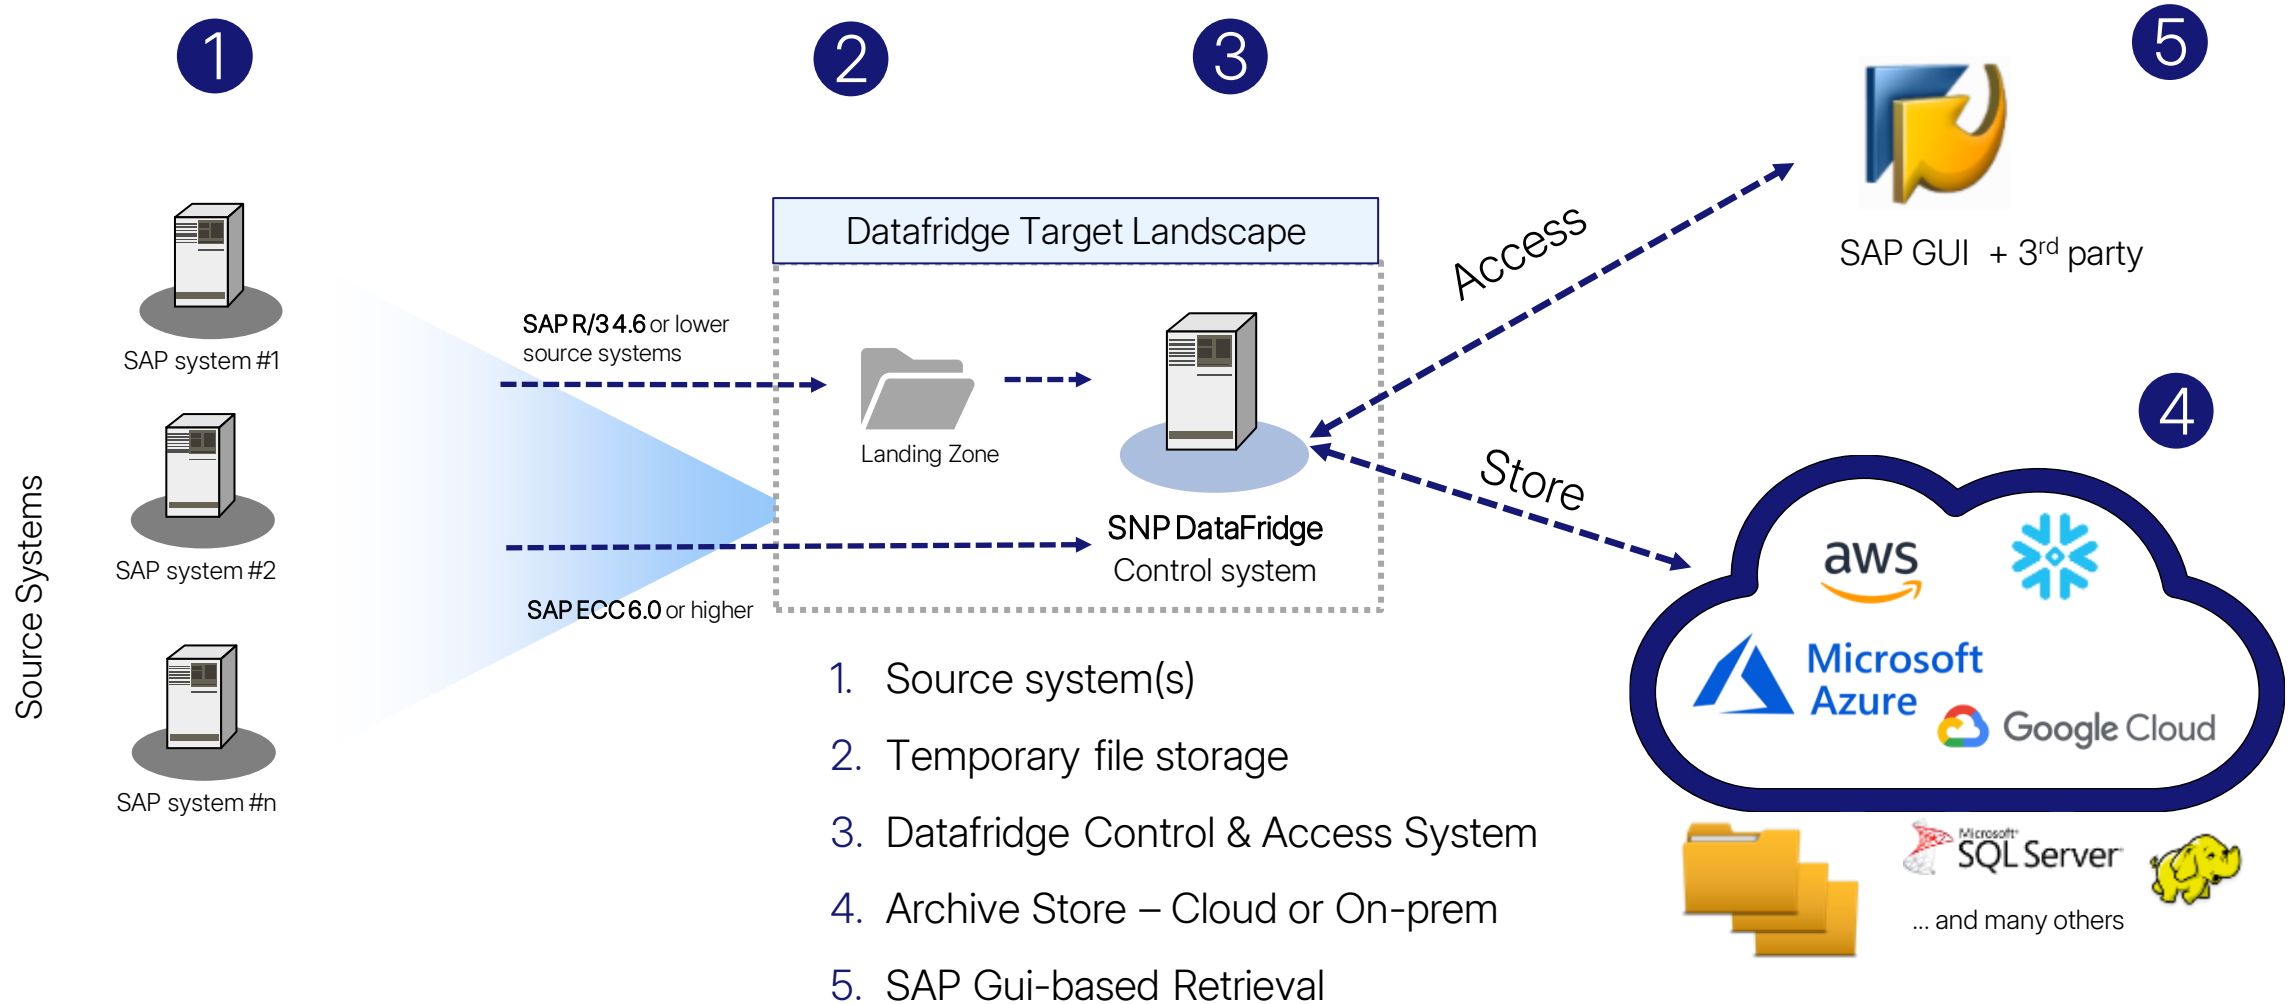

Decommissioning Process

1. Define the scope for data and documents that are to be retained:
 - For internal purposes (analysis/reporting, services)
 - For regulatory purposes (tax audits)
2. Extract data for storage in compliant archive. Keep respective link to documents.
3. Define and maintain retention policies & periods.
4. Customize transparent data access for reporting and audit needs.

DataFridge System Landscape: Example

Transparent Data Access

DataFridge GLUE16

- Basic table browser (w/o hierarchies)

Fridge Browser

- Flexible table browser (hierarchies, drill-down, link to attachments)

Transactions (30+), custom reports

- Similar to SAP t-codes, customer-specific reporting

3rd party frontend, analysis tools

- Open for adaptations and customizing

SAP DataFridge Object Tree

Business Objects Legal Holds

Object name	Description
R3_LC01	Customer master
R3_FEBEP	Electronic Bank Statement Lns.
R3_FEBKO	Electronic Bank Statement Hdr.
R3_FIDOC	Finance Document

Display Transactions in Data Fridge

There two types of display transactions in SNP Data Fridge:

- SAP T-code Clones: „Copies“ of SAP display transactions adapted to DataFridge specific data access path
- T-Code Replicas: „Fridge Brower“-based generic display transactions: customized data display, adapted from generic retrieval, using Data Fridge business object to retrieve the application data

The screenshot shows the SAP Finance Document custom view. The top section is the 'Finance Document Header (E71_800_BNPF)' with fields for Document Type (DR), User name (ANDERSONK), Company Code (0005 - BestFun Germany new GL), Document Date in Document (21.12.2006), Fiscal Period (12), Reverse Document Number, Name of User Who Posted this Document, Accounting Document Number (180000001), Fiscal Year (2006), Posting Date in the Document (21.12.2006), Currency Key (USD), and Reverse document fiscal year (999). The bottom section is the 'Finance Document Line Item (E71_800_BSEG)' with columns for Number of Line Item Within Accounting Document, Posting, General Ledger Account, Assignment Number, Tax on sales/purchases code, Debit/Credit Indicator (enriched), and Amount in document currency. Two line items are visible: 001 (Debit) and 002 (Credit), both with an amount of 1,800.00.

FB03 Replica – Display FI Document

The screenshot shows the SAP Debitoren Einzelpostenliste. The top section displays Customer (0000001002), Company code (1000), and Name (Omega Soft-Hardware Markt). The bottom section is a table with columns: Id, Assignment Number, Accounting, Do, Document D, S, Due, Amount in Local Currency, Local, Document N, and Ite. The table contains 14 rows of transaction data.

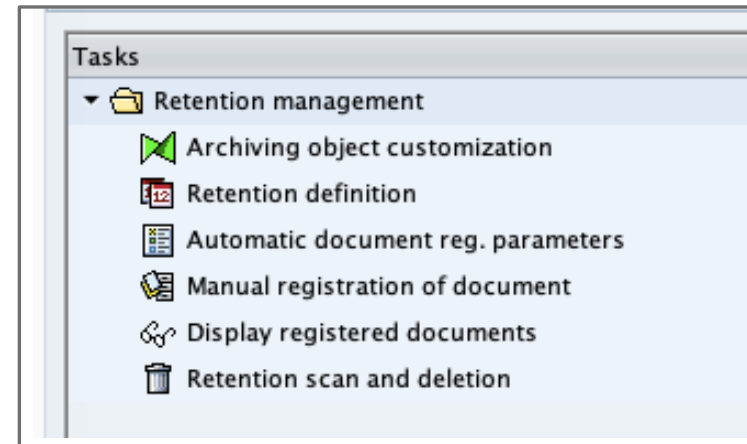

Id	Assignment Number	Accounting	Do	Document D	S	Due	Amount in Local Currency	Local	Document N	Ite

FBL3N Clone – Selection Result

Compliant Retention of Data and Documents

- Cover company-specific and legal requirements
- Define and maintain retention rules
- Consider management of legal hold(s)
- Consistent deletion once retention periods have expired

Agenda

- SAP System Decommissioning
- Datafridge Concept & Features
- Project Approach & Support
- Summary, Q & A

Typical Decommissioning Project Approach

A

Analyze

- Understand as-is situation
- Simulation of to-be situation and project
- Recommendation on approach
- Determination of roles & responsibilities (RACI) and required resources (e.g., project system landscape, DevOps, double maintenance...)
- Clarification of project commercials

1

Blueprint & Setup

- Decommissioning blueprint created
- Test strategy defined
- Project setup initiated: teams, staffing, sourcing, authorization, risk assessment
- Control system setup ready for sample data load
- SNP software deployment & config.
- Management and/or auditor review

Duration: 1 – 3 weeks

2

Sample data load

- Sample data is loaded to the control system based on the initial Blueprint
- Basis for knowledge sharing, enablement, and training
- Key users confirm the display access and authorizations during UAT tests

Duration: 2 – 6 weeks

3

Bulk data load

- Bulk data extraction and ingestion into DataFridge
- SAP tables (customizing, master data, transactional data)
- Loading of attachments, or of re-pointering the attachments to content server

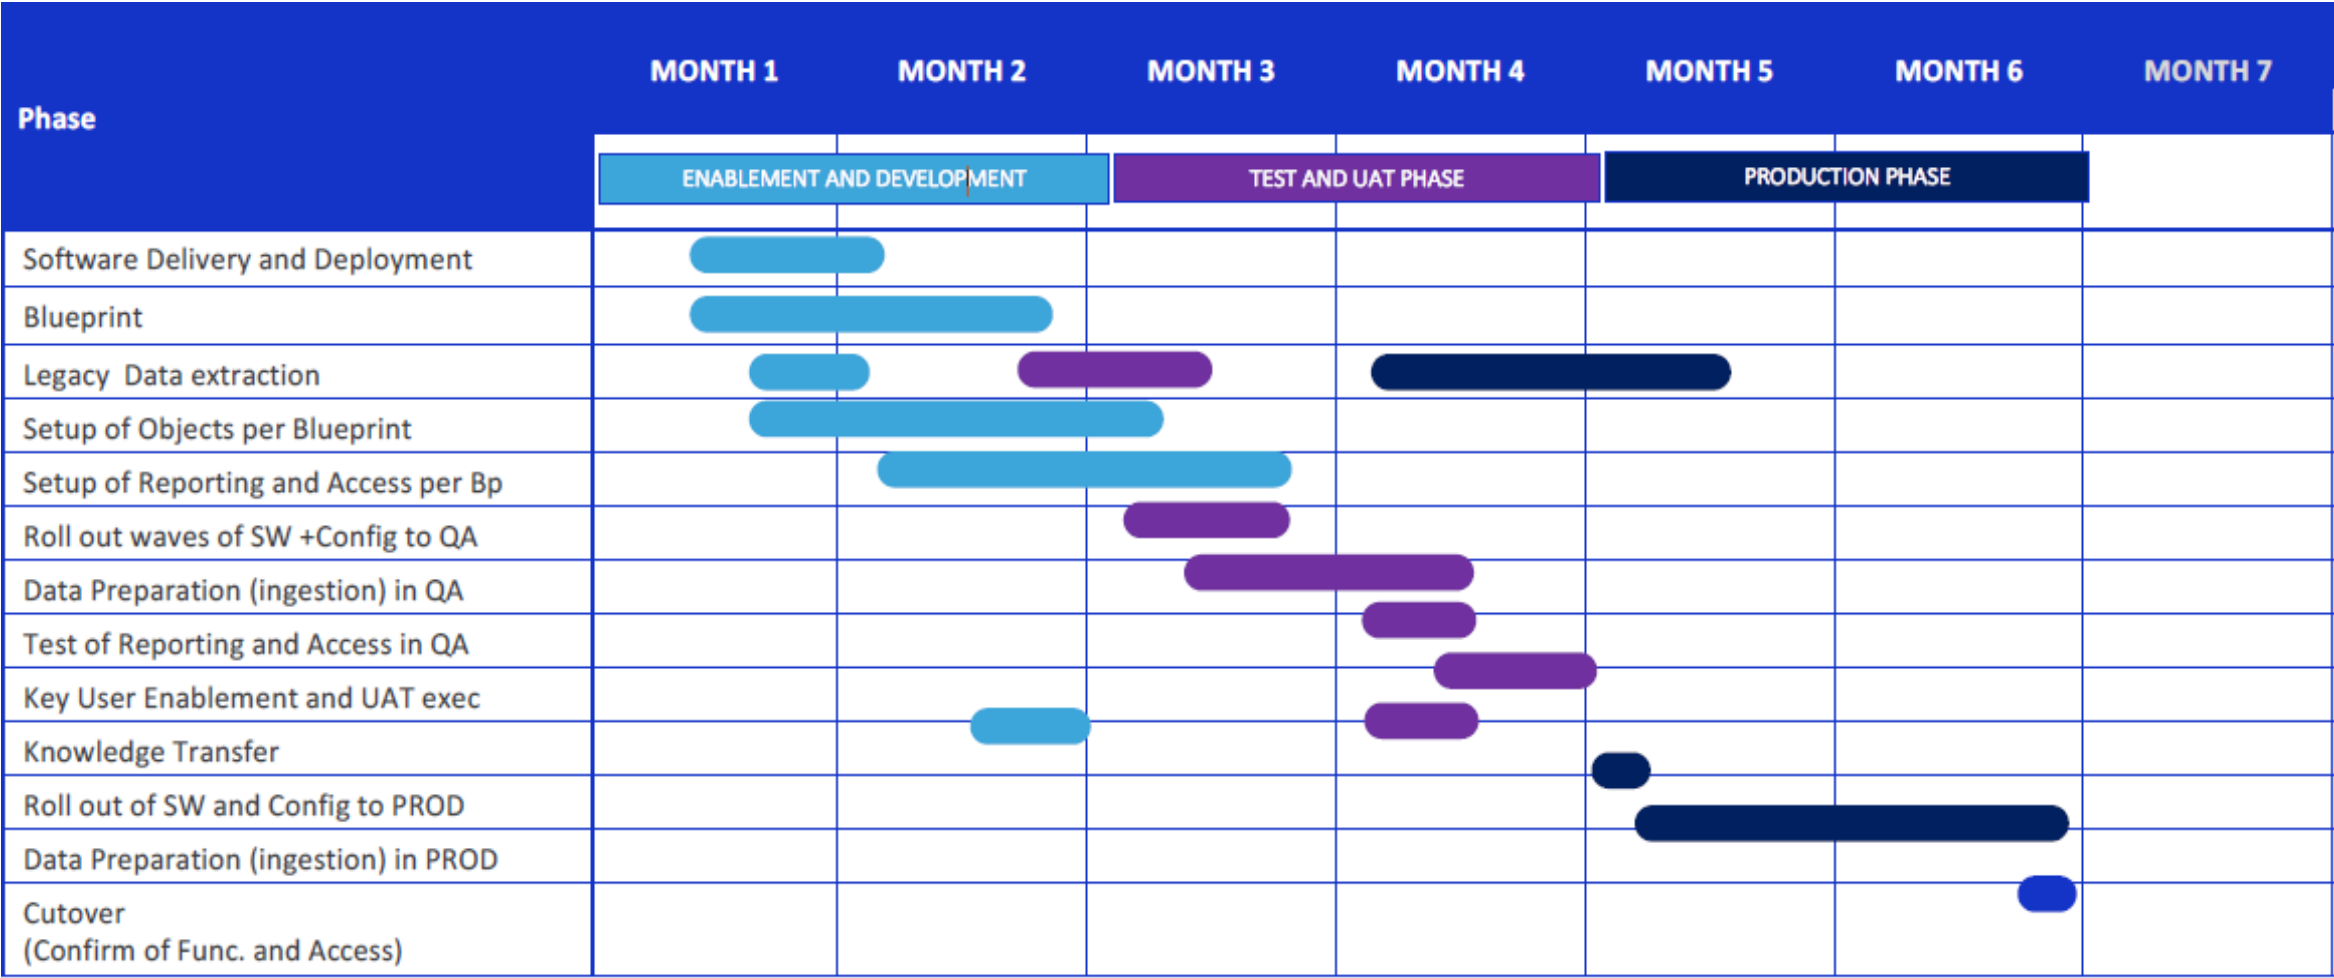

Duration depends on volume of data

S

Finalization

- Legacy SAP system archiving is finalized the whole process by handing over all created materials and receiving an official sign-off.
- If required, a non-production environment is created either as a copy of production or through metadata migration.

Sample Project Timeline – System Decommissioning

Agenda

- SAP System Decommissioning
- Datafridge Concept & Features
- Project Approach & Support
- Summary, Q & A

7 Things to Take Home ...

- Effective legacy data extraction
- Central approach for multiple source systems
- Flexible and compliant archive data store
- SAP-centric control system
- Transparent, user-friendly retrieval access
- Retention management and legal hold
- SAP- and KPMG-certified
